# Variants

A Variant is a version of a [Product](#), which can be managed from the [Inventory](#) tab. These will be separated by [Variant Options](#), and those distinctions are made in pricing or stock, e.g.

- Size
- Colour
- Fabric Grade

A Variant may be linked to multiple [Unique Stock Records](#).

Each Variant on a product may be given:

- Specific pricing
- Specific stock
- Specific dimensions
- Specific product imagery
- Specific [Customisations](#)
- Specific [Upsells](#)
- Specific [Addons](#)

Other features around the site also link to Variants, including [Promotions](#), [Reporting](#), [Order Fulfilment](#), etc.

# Unique Stock Records

A Unique Stock Record is a sub Variant; it is a Variant to which Customisations have been applied.

A Unique Stock Record is also known as a USR

It will inherit all characteristics of the parent Variant, except that it will also show the linked Customisations.

These may be used just for [Stock Management](#) and order fulfilment, or as a way of listing specific products for sale.

These are managed via the [Inventory](#) tab, and may either be created there, or when a product with [Customisations](#) is added to a [Purchase Order](#).

Unless a Unique Stock Record is marked as enabled, its selling price will not be used in the POS, eCommerce or CMS. Instead, the default price of the Variant will be used

Unless a Unique Stock Record is marked as enabled, its cost price will not be used in the POS, eCommerce or CMS. Instead, the default price of the Variant will be used.

## FAQs

### How can I add a new Unique Stock Record?

A full guide is available [here](#).

### My Unique Stock Record is marked as disabled for eCommerce - will its stock be

# used?

While free stock of an enabled USR will show to the customer as 'in stock', free stock relating to a disabled USR will not, and the customer will see a default lead time for the parent Variant. However, if a customer does purchase a Variant and select a combination of Customisations which match an existing USR with free stock, then that stock will be automatically allocated to that Sales Order Line regardless of USR status.
