

Unique Stock Records

A Unique Stock Record is a sub Variant; it is a Variant to which Customisations have been applied.

It will inherit all characteristics of the parent Variant, except that it will also show the linked Customisations.

These may be used just for [Stock Management](#) and order fulfilment, or as a way of listing specific products for sale.

These are managed via the [Inventory](#) tab, and may either be created there, or when a product with [Customisations](#) is added to a [Purchase Order](#).
