Currencies

Manage your currencies here

- Summary

Summary

If you have been enabled for multiple currencies, these can be managed here.

Setup

GBP (£ Sterling) is the default currency, and that is how all Product prices are managed in the Inventory.

If a customer selects a different currency on your website, then IXO Commerce will automatically convert all prices to that currency based on the exchange rate managed on this page.

Field	Purpose
Exchange Rate	*This is the exchange rate used to convert all prices on the website (product/customisations/options)*
Auto Update	*If enabled, this will automatically update the exchange rate on a daily basis base on a feed from the European Central Bank, to match the most recent exchange rate* *This will automate the currency function, and should only be disabled if you need to override these rates*
