

Group

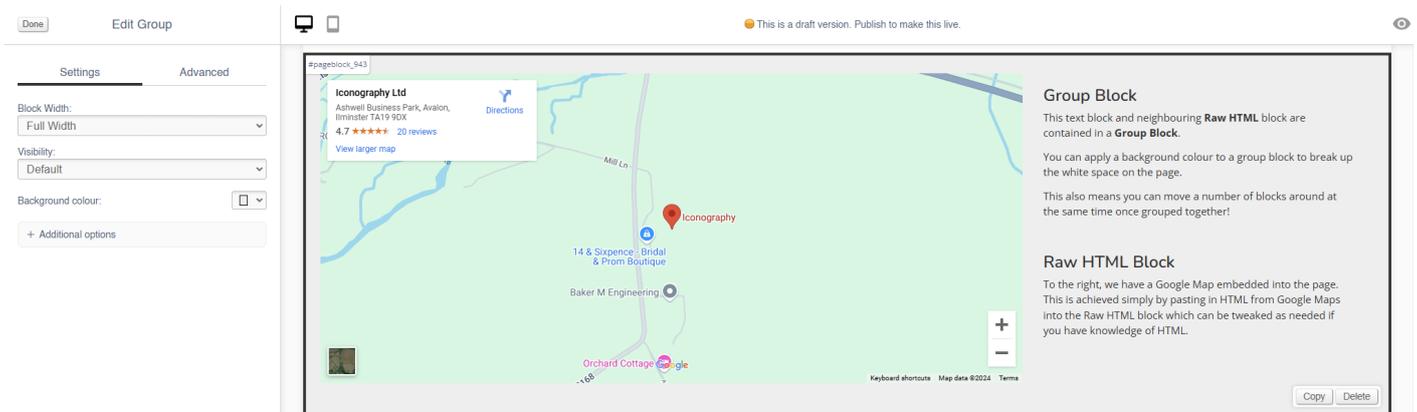

Group blocks are used to create nested collections of blocks; they may also be given a background colour, allowing you to break up the appearance of a page.

Blocks may be moved within a group, or the block may be moved on the page, which will update move its contents too.

Adjusting a Group will adjust the blocks within it as well, e.g. reducing the width of the Group will make the blocks within it smaller, or changing the background colour of the Group will override the background colour of blocks within it.

To add a block to a Group, simply drag and drop it over the Group.

Appearance

The screenshot shows the WordPress block editor interface. On the left, the 'Edit Group' sidebar is open, showing settings for 'Block Width' (set to 'Full Width'), 'Visibility' (set to 'Default'), and 'Background colour' (set to a light blue color). The main editor area displays a 'Group Block' containing a Google Map and a 'Raw HTML Block'. The map shows a location in Ashwell, UK, with a red pin and a popup for 'Iconography Ltd'. The 'Raw HTML Block' contains the following text: 'To the right, we have a Google Map embedded into the page. This is achieved simply by pasting in HTML from Google Maps into the Raw HTML block which can be tweaked as needed if you have knowledge of HTML.' The editor also shows a 'Done' button, a 'Publish to make this live' notification, and a 'Copy | Delete' button at the bottom right of the block.

Editing the Block

Settings

Field	Purpose
-------	---------

Block Width	<p>Choose from:</p> <ul style="list-style-type: none"> • 25% • 33% • 50% • 66% • 75% • 100% • Full Width (set to always be the full width of the user's device)
Visibility	<p>Set the block visibility from the list:</p> <ul style="list-style-type: none"> • Default (both) • Desktop Only • Mobile Only • Hidden (none)
Background Colour	<p>Choose a background colour for your image. Choose from recommended colours, or use a colour picker.</p>

Additional Options

Field	Purpose
Invert text colour	Toggle to invert the text colour
Content contained?	Toggle to contain the Content - this will affect the maximum width available to the content in the Group

Advanced

Padding

Adding padding will insert space within the current block; this will adjust the position of content within the block.

More information is available [here](#).

Margin

The margin will add additional space around the current block.

More information is available [here](#).
