Options

Define Options to add to Products.

- Summary

Summary

Product Options have two purposes - they provide the Option Names for variant options, as well as for customisations.

In addition, Product Options can be used to drive variant level Filters.

> You will need to create Options before you can set up any products with Customisations or Variants.

Setup

Field	Purpose
Option Name	*This doubles as a label in the CMS, and also as the value that will be shown to the customer on the website*
Show on Filter	*This enables this Option Name to be used as a filter on Product Listing Pages, when this Option Name is linked to a variant option.*

How will it appear?

The Option will appear as the Option name, e.g. 'colour' or 'size':
